

H Range - Hygienic grade

PROGRESSING CAVITY PUMP
Italian Designed & Manufactured

Legendary Reliability

Features:

Hygienic:
We supply hygienic pumps, particularly designed to satisfy the most rigorous requirements and to avoid product contamination and spoiling.

Cleaning:
Manufactured free of any stagnation areas, the "H" range is available with clean in place system (CIP) and bypass ports.

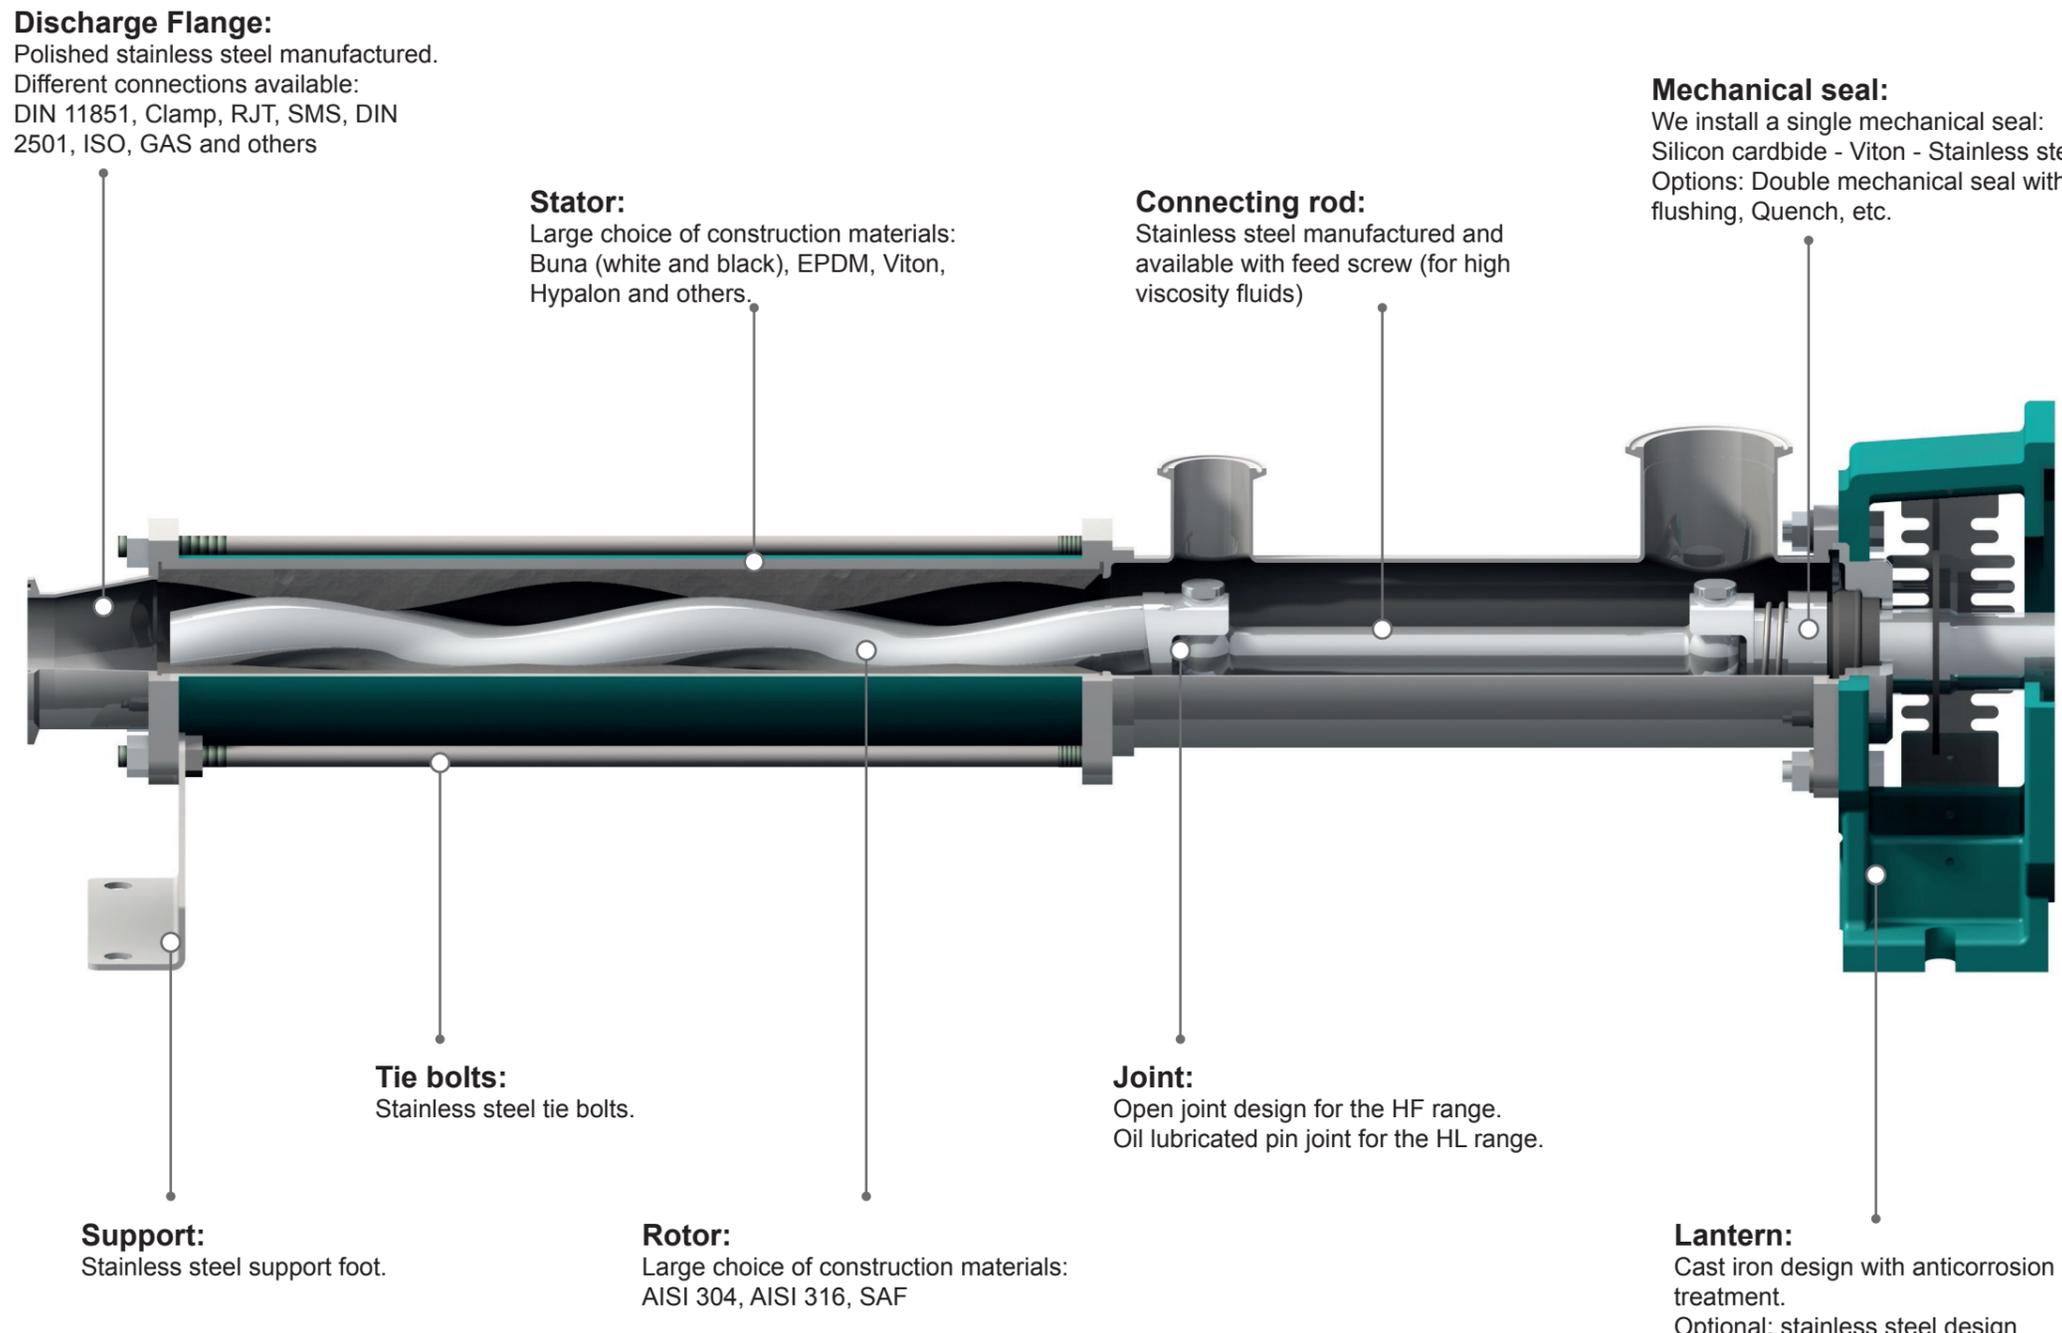

Viscous Products:
For very concentrated viscous liquids, our hygienic models can work at low speeds and can be manufactured with enlarged inlets or with a hopper and an auger to convey the material into the pump.

Shear Sensitive Liquids:
The pumped product is always transferred gently. The progressive cavity pump principle doesn't generate a centrifugal action and there is no big changes in speed which would damage the product inexorably.

Material Selection:
Inside the company we produce the most important components of our pumps, this factor gives us the possibility to keep total control over the quality of the final product.

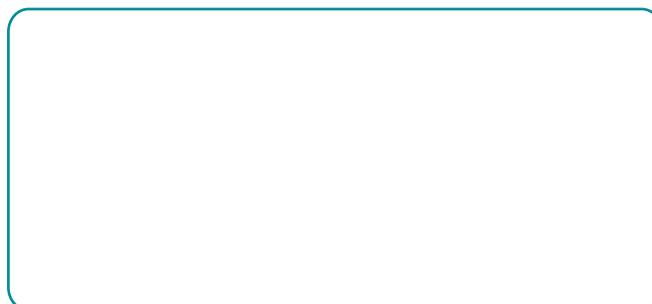

Markets:

-  Dairy products
-  Beverages
-  Olive oils and fats
-  Fruit and vegetables
-  Beer and wine industry
-  Pharmaceutical and cosmetic industry
-  Candy, chocolate and sugar
